## New Features Ibase Revision 7.6.13

### Note

Release Date: 31.05.2024

The information on updates and changes pertains to the Ibase FAT Client

### Track & Trace

In Ibase Track & Trace, there is now the option to incorporate own [icons](#) into the trace info display mode.

Multilingual language texts have now been enabled for the [Notification time slot function](#).

### Addresses

Using the **CAN\_USE\_ADR\_LOCKED\_ADR** switch in **ConfigDef.LBaseClient**, it is possible to define whether [locked addresses](#) may be used (with a message as information).

Previously, the switch was only evaluated at **system** or **ORGID level**. Now this switch is also evaluated at **address level**.

### ePaper

Drag & drop function has been extended to Citrix environments. The function must be enabled on Citrix for this.

### Invoicing

By setting the **BEL\_LDAT\_ADDON\_DAYS** configuration switch in **ConfigDef.LBaseClient**, [services that are in the future](#) must be invoiced with the present date.

## WMS

The stock search dialog in the [order movements](#) has been extended to include the "**Production date**" column.

## Shipment entry

Automatic calculation of the [cubic meters](#) can be disabled using the **SDB\_CBM\_NO\_AUTO\_CALC** configuration switch in **ConfigDef.LBaseClient**.

## eCMR

On installation of the component and registration with Collect&GO, CRMs can be made available digitally in the future.

### Caution

The Ibase eCMR component must be installed to use the new feature. Please contact the Ibase team for this.
